

ARABIA - N.E. COAST

GULF OF OMAN

## MASKAT &amp; AL MATRA

SURVEYED BY LIEUT. A.W. STIFFE, R.N.

1860

The upright soundings are from Lieut. Ward's 1849 and the sloping figures from Lieut. Brads and Haines Surveys of 1828.

Fishers Rock - Lat. 23° 37'.55 N. Long. 56° 35'.56 E.

High Water F.A.C. D.L. 15° Springs rise 9 ft. Neaps rise 6 ft.

1 fine, blk black, m. mud, r. rock, s. sand, sh. shells.

The figures on the land show the heights in feet (approximately) except those in upright figures, which are determined.

Water, Castle and other supplies are precarious.

Magnetic Variation in 1855 increasing about 2 annually.

Note. The parts hatched over, show the limits of ground occupied by dwellings detached and interspersed with trees.

SOUNDINGS IN FATHOMS

Natural Scale 670

Soundings are reduced to Mean Low water  
of Omani spring tides, or to a level 22.50  
feet below a G.T.Z. bench mark set on a  
stone embedded in the south verandah of  
the British Residency.
